5 Figure 12 illustrates a networked system 200 of the present invention in which a single separate display unit 202 containing a plurality of wheels may be linked to one or more game devices 204. Game devices 204 may contain any of a large variety of games and game displays. Each game device 404 is linked to display unit 202 by a communication device 206. Communication device 406 may use many different communication protocols and systems, such as Ethernet communication protocols, network cards, and cables.

10 In the claims

Please amend the claims with the following:

B¹⁰ 13
15 The gaming apparatus of Claim 10 further comprising a first pay line extending between the centers of said first group and said second group, a second pay line extending between the centers of said second group and said third group, and a third pay line extending between the centers of said third group and said first group.

B¹¹ 17
15 The gaming apparatus of Claim 11 further comprising a payline that incorporates all the wheels.

20
19 A method of playing a game of chance, comprising the steps of:

(A) placing a position bet;

(B) spinning at least two ^{separate} groups of concentric wheels having indicia on a viewable annular surface, each of said group ^{of concentric wheels} having at least two wheels therein;

25 (C) stopping, randomly, said spinning wheels;
